

Tiger Tooth Aloe

Aloe juvenna

- I have beautiful bright green leaves that are flecked with white and turn red-brown in full sun.
- I rarely need repotting, but if I'm outgrowing my pot or I've stopped growing, it's best to repot me during the spring. Use a mixture of 2/3 cactus soil and 1/3 sand or pebbles.
- I should never be left to sit in stagnant water and love intense sunlight. Ease me from indirect sun into direct sun slowly, adding about 1 additional hour in direct sun a day until I can tolerate full, direct sunlight.
